

The Green Living Grant Scheme has been created to assist Island residents with the reduction of carbon emissions and household energy bills and provides a financial contribution (for eligible applicants) of up to a maximum of £5,725 per property, to help make residential properties more energy efficient.

Benefits of External Wall Insulation

Lower fuel bills

High insulation levels achieved by the installation of an External Wall Insulation system result in savings on energy bills.

Prolongs building life

EWI systems protect the building facade from the effects of the weather. EWI systems have an assessed minimum life of 30 years.

Improved building appearance

EWI systems incorporate an extensive range of finishes and colours ranging from silicone textured renders to brick-effect finishes.

Eliminates condensation

EWI helps eliminate interstitial and internal condensation and assists with overcoming associated problems such as damp internal walls and mould.

ATOP Ltd are accredited with Construction Isle of Man, with over twenty-five years' experience.

ATOP Ltd are an approved installer for K Systems External Wall Insulation Systems

K Systems provide project specifications and warranties

Frequently asked questions

Is my property suitable?

ATOP have installed EWI for over 15 years. EWI systems suit every building and construction type, whether they are solid wall, concrete, timber, or steel framed.

What are the main benefits?

Annual fuel bills will decrease by up to 35% or more whilst improving the appearance, value and durability of your property.

Will I feel the difference once installed?

Yes - the effects are instant. You will not require the heating on as long or as often and there will also be acoustic benefits. The effects will also be felt in the summer months, with your property less susceptible to temperature fluctuations.

How much money will I save a year?

An average solid walled semi-detached house could typically save £450 per year depending on property type. This increases with greater insulation thicknesses.

What disruption can I expect?

Due to the installation being external the disruption is minimal in comparison to internal wall insulation. Drilling and mixing equipment will be in use and there may be a requirement for scaffolding. Our installers will keep you informed of the programme of works before the installation begins.

*The IOM Government's Green Living Grant Scheme can provide **eligible applicants** with financial support towards external wall insulation. Further details along with an online application form can be found here - <https://www.iomdfenterprise.im/green-living>*
